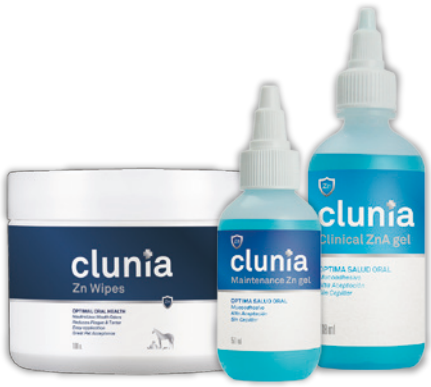
CLUNIA® Clinical Zn-A gel
CLUNIA® Maintenance Zn gel
CLUNIA® Zn Wipes

Gel Oral Mucoadhesivo y Toallitas de Fácil Aplicación para una Higiene Buco-Dental de Alta Eficacia y Seguridad en Perros, Gatos, Exóticos y Caballos.

Ficha Técnica

La enfermedad periodontal es posiblemente la patología más común en perros y gatos *(Lund EM y col, 1999; Maretta SM, 1994)*. Se ha reportado una incidencia del 60% en gatos domésticos de más de 3 años de edad y hasta el 85% en gatos mayores de 6 años *(Maretta SM, 1994; Tholen M y Hoyt RF, 1990)*; en perros se han reportado cifras similares.



La enfermedad periodontal es una enfermedad crónica e irreversible que afecta al tejido de sostén de los dientes (encías, hueso alveolar, cemento radicular y ligamento periodontal). A menudo esta patología se divide en dos condiciones: la gingivitis y la periodontitis. La gingivitis es la inflamación de la encía, mientras que la periodontitis es la inflamación de los tejidos no gingivales: el ligamento periodontal y el hueso alveolar *(Harvey CE, 2005)*.

El cumplimiento de los tratamientos y las medidas preventivas por parte de los propietarios es esencial para el mantenimiento de la cavidad oral en óptimas condiciones. La facilidad de aplicación de los productos de tratamiento y profilácticos, y el grado de aceptación de los mismos son esenciales, especialmente en animales de difícil manejo.

Composición:

	Clinical Zn-A gel	Maintenance Zn gel	Zn Wipes
Gluconato de Zinc	2%	1,5%	1,5 %
Ácido ascórbico	1,6%	-	-
Taurina	1%	0,5%	0,5%
Excipientes	csp	csp	csp

Mecanismo de acción:

- Los productos de la línea CLUNIA® restauran el microambiente de la boca y encías, creando un entorno que favorece su curación natural. Su fórmula completa proporciona Zinc altamente biodisponible a las capas más profundas de la mucosa oral.
- El Zinc es un factor esencial en más de 300 reacciones enzimáticas, muchas de las cuales intervienen en la regeneración de la matriz extra-celular, los procesos de cicatrización, la reparación del tejido conectivo, la inflamación y el crecimiento celular. En la cavidad oral el Zinc, debido a su papel en la producción de colágeno, permite la recuperación del tejido gingival de una forma eficaz dism inuyendo la inflamación.
- La Taurina tiene acción quelante sobre compuestos de azufre que producen el mal aliento y oxida los ácidos grasos volátiles en la boca, reduciendo rápidamente (a partir de 30 segundos) la halitosis.
- La Vitamina C (ácido ascórbico) es importante para la producción de colágeno, que es la principal proteína estructural en la encía. Estimula la reparación del tejido gingival y acelera su reparación. Además el ascorbato de zinc estimula las glándulas salivales, proporcionando una acción de lavado en toda la cavidad oral, que facilita la difusión del gel por todos los rincones de la boca.
- La Carboximetilcelulosa es muco-adhesiva y proporciona un mayor tiempo de contacto del producto con las superficies de la cavidad oral *(Gurny R, Meyer JM, Peppas NA, 2015)*.

VETERINARIAN RECOMMENDED

Características

- Protección completa: placa, sarro, gingivitis, estomatitis y halitosis.
- Reduce la formación de placa.
- Acción antiséptica frente a patógenos periodontales.
- Favorece la resolución de la gingivitis.
- Estimula la cicatrización de encías y mucosas lesionadas o ulceradas.
- Neutraliza rápidamente (30 segundos) el mal aliento.
- Natural (Zinc, Vitamina C y Taurina) y muy seguro - Ideal para tratamientos prolongados en los que el animal ingiere el producto.
- Sin sabor - Alta aceptación.
- Gel de fácil aplicación sin necesidad de cepillado.
- Toallitas que complementan la acción de la solución impregnada con una limpieza mecánica ejercida por el tejido en relieve.
- Fórmula avanzada para uso terapéutico: CLUNIA® Clinical Zn-A gel.

CLUNIA® Clinical Zn-A gel
CLUNIA® Maintenance Zn gel
CLUNIA® Zn Wipes

Gel Oral Mucoadhesivo y Toallitas de Fácil Aplicación para una Higiene Buco-Dental de Alta Eficacia y Seguridad en Perros, Gatos, Exóticos y Caballos.

Indicaciones:

- Perros y gatos:
  - Uso Terapéutico - CLUNIA® Clinical Zn-A gel:
    - ✓ Antes y después de una revisión y/o higiene bucodental.
      - Aplicado a diario durante los 7-10 días previos a una limpieza dental, particularmente en animales con gingivitis, CLUNIA® Clinical Zn-A gel reduce significativamente la hemorragia al mejorar la salud de las encías y acorta el tiempo de la intervención.
      - Al igual que los antibióticos aplicados profilácticamente tras una cirugía, la acción antiséptica de CLUNIA® Clinical Zn-A gel ayuda a prevenir infecciones tras la limpieza dental.
    - ✓ Problemas periodontales avanzados.
    - ✓ Post-cirugía oral o maxilofacial.
    - ✓ Heridas y laceraciones bucales.
    - ✓ Úlceras orales.
    - ✓ Abscesos.
    - ✓ Mantiene en óptimas condiciones (al estimular la salivación) la cavidad oral en pacientes intubados, sedados y post-quirúrgicos.
  - Uso Profiláctico y/o de Mantenimiento - CLUNIA® Maintenance Zn gel y CLUNIA® Zn Wipes:
    - ✓ Aplicados a diario, ayudan a mantener una salud oral óptima, asegurando la capacidad de la mascota de seguir una correcta alimentación durante toda la vida, previniendo problemas más graves como la endocarditis bacteriana y contribuyendo a mejorar el bienestar del animal.
    - ✓ Para limpiar y refrescar la cavidad oral y los dientes.
    - ✓ Control de halitosis.
    - ✓ Exentos de sabor, neutralizan los olores desagradables. Con alta tolerancia por parte de las mascotas.
    - ✓ CLUNIA® Maintenance Zn gel permite una fácil aplicación, sin necesidad de cepillado y con un mínimo manejo del animal.
    - ✓ CLUNIA® Zn Wipes, gracias a su textura única, permite combatir eficazmente la deposición de placa mediante una acción mecánica.
- Exóticos:
  - Conejos: Problemas dentales asociados a sobrecrecimiento y maloclusión dental (úlceras, abscesos…).
  - Hurones: Enfermedad periodontal.
  - Reptiles: Estomatitis.
  - Aves: Sinusitis (leves o intermedias).
- Caballos:
  - Heridas producidas por el bocado.
  - Heridas/cicatrizes post-extracción dental.
  - Lesiones orales.
  - Abscesos.
  - Irritaciones post-limado dental.
  - Periodontitis.
  - Estomatitis.

Modo de Empleo:

- CLUNIA® Clinical Zn-A gel:
  1. Desenrosque el tapón aplicador, vierta el contenido del vial adjunto (vitamina C) en la botella y permita que la vitamina C se deposite en el fondo de la botella. Coloque el tapón y agite hasta que se disuelva.
  2. Aplique 1 gota *(del tamaño de un guisante -aproximadamente 0,5 ml- para mascotas de hasta 10 kg, aumente la dosis para perros medianos, grandes y caballos)* de gel en cada lado de la boca, en las

Para uso profiláctico y máxima aceptación: CLUNIA® Maintenance Zn gel y CLUNIA® Zn Wipes.

No mancha el esmalte dental.

No mancha superficies del hogar y tejidos.

Bajo coste diario.

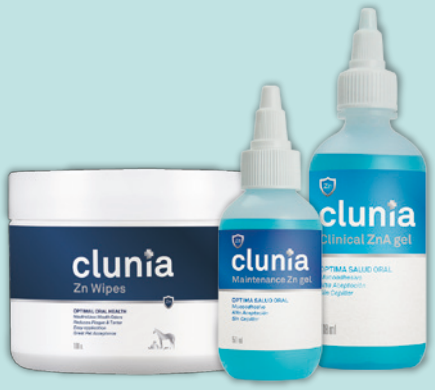
Ficha Técnica

encías superiores; la acción de limpieza natural de la boca distribuirá el gel a sus áreas más remotas.
3. Repita la aplicación cada día para una máxima eficacia.
4. La mayoría de los perros de razas medianas y grandes aceptarán la aplicación directa de la punta del aplicador incorporado; en gatos y perros de razas pequeñas, para maximizar la aceptación, deposite una gota en el dedo índice, bastoncillo, o cepillo dental y aplíquela en las encías.

• CLUNIA® Maintenance Zn gel: siga los pasos 2 a 4 arriba descritos.
• CLUNIA® Zn Wipes:
1. Enrollar la toallita sobre el dedo índice o con el que se desea aplicar el producto.
2. Deslizar suavemente sobre dientes y encías de ambos lados de la boca.
3. Repetir su aplicación diariamente y recompensar al animal para asegurar una experiencia positiva.



Seguridad:
Muchos productos dentales de uso doméstico contienen clorhexidina. Investigaciones publicadas han demostrado que el uso regular de clorhexidina en odontología veterinaria puede aumentar la tasa de mineralización de la placa (formación de cálculos), manchar el esmalte dental (marrón) y disminuir el sentido del gusto del paciente *(Hale FA, 2002)*. Además, por su acción antimicrobiana, al ser ingerido destruye parcialmente la flora digestiva.
CLUNIA® Clinical Zn-A gel, CLUNIA® Maintenance Zn gel y CLUNIA® Zn Wipes son productos naturales (Zinc, Vitamina C y Taurina) y generalmente reconocidos como el enfoque más seguro para el cuidado oral, especialmente en animales, que a diferencia de las personas, ingieren todo el producto. No tienen contraindicaciones, por tanto pueden ser administrados a largo plazo o de por vida.
La vitamina C estimula la salivación por lo que algunos gatos pueden presentar sialorrea tras la administración de CLUNIA® Clinical Zn-A gel. CLUNIA® Maintenance Zn gel, CLUNIA® Zn Wipes al carecer de vitamina C, puede ser una mejor opción para esos gatos.

Advertencias: Guarde el envase bien cerrado, en un lugar fresco, seco, protegido de la luz solar y fuera del alcance de los niños y los animales. Se recomienda almacenar el envase de CLUNIA® Zn Wipes boca abajo para maximizar la humedad de las toallitas.
Después de mezclar la vitamina C, CLUNIA® Clinical Zn-A gel tiene una vida útil de aproximadamente 6 meses en un armario fresco y oscuro, o 1 año en el refrigerador. El color de la solución indica el grado de frescura y eficacia del producto: utilícelo mientras se mantenga azul o verde; un color marrón o amarillo denota que el producto, aunque seguro, ya no es fresco y eficaz.

• ¿Qué causa el cambio de color? La vitamina C es inestable en soluciones acuosas como el gel de metilcelulosa en la fórmula de CLUNIA®. Una vez que se mezcla, la vitamina C (ácido ascórbico) cambia muy lentamente a dehidro-ascórbico que es de color amarillo; cuando el amarillo se mezcla con el azul de gel de CLUNIA®, se proyecta un color verde; cuando la concentración de ácido dehidro-ascórbico es muy alta, el color cambiará de verde a marrón amarillo.

Presentación:
• CLUNIA® Clinical Zn-A gel: 118 ml.
• CLUNIA® Maintenance Zn gel: 59 ml.
• CLUNIA® Zn Wipes: 100 Toallitas.
